**Unusual Rock Collection.**

Prof. and Mrs. L. O. Kasper are the proud owners of an unusual rock collection acquired over a period of years on their various trips. They have several stones of Wisconsin (Mrs. Kasper's home), some from the

McDonald Observatory, some from Arkansas, some pretty shells from Galveston, stones and pebbles from the Davis Mountains, and our own native petrified wood stone of various shapes and colors and just many, many more too numerous to mention. One can spend an hour or more viewing them. Gathering of the different kinds of stone when one has a chance is a very interesting hobby and could be practiced by many of our county since Lee County has rocks so abundantly.
